

Bus Disinfection Robot

Aisle Rover UV 120

Aisle Rover™ UV Robot disinfects Passenger Buses from contagious disease causing bacteria, fungi and viruses. It emits Ultra-Violet germicidal radiation in the UV-C spectrum (200 – 280nm), widely used for sterilizing equipment and creating sterile environments.

Features

- Aisle Rover UV robot is a remote controlled equipment that assists the cabin cleaning team to sanitize the Bus. It can be safely operated from a distance, eliminating the risk of exposure to UV radiation to humans.
- Aisle Rover is designed to be easily fit through the doors and into the aisle where it spreads out its arms and emits UV-C radiation.
- Aisle Rover traverses the entire aisle to adequately expose all accessible surfaces as it disinfects the bus without any human intervention.

Benefits

- Assures passengers of safe environment
- Saves valuable turnaround time for Operators
- Thoroughly sanitizes the surface thus reducing the spread of virus/bacteria.
- Easy to operate light weight robot; can be moved easily between buses.
- Cost effective and durable.

// AISLE ROVER™

Functions

- Aisle Rover UV Robot is to be carried into the bus through the door and placed at the beginning of the aisle.
- The robot works on external as well as bus power through standard sockets used for operating Vacuum Cleaners / Carpet cleaners
- The robot's UV arms need to be spread to hover freely over the seats.
- The robot can be remotely operated by the cleaning staff to move it through the aisle and back.

Specifications

- Input Voltage : 110 ~ 220V AC
- Modes : Manual Speed Control
- Robot Motors : Glide-drive silent independent dual drive motors. Variable Speed. Superfast top speed of 3.2 feet per second. Free Wheeling mode
- UV Wavelength – 254 nm
- Mobile Unit :
 - Height : 72"
 - Base : 14"W X 17" L
 - Extended Arm Span : 80"
- Interface : Mobile / Touch panel
